Sand & gravel dredges are our only business.

H-Series dredges

Rotary cutter dredges

Linear Cutter dredges

Twinkle Co H-Series dredges are mining machines that float. They are designed with the philosophy of rugged simplicity. Unlike other hullpump dredges on the market, H-Series dredges are purpose built machines to do one thing – produce sand & gravel efficiently from shallow to medium depths. The OpenDeck design allows for easy maintenance and eliminates the open hull that can literally sink competitive machines. Twinkle Co instruments and controls maximize the capability of the dredge pump and allow our hullpump dredges to out produce other hullpump dredges. Available with either a rotary or Linear cutter, diesel or electric power, H-Series dredges are matched to the needs of our customers. Call Twinkle Co today to discuss your production requirements and see if an H-Series dredge will meet your goals.
