The innovative leader in sand & gravel dredges.

L-Series dredges

Diesel power

Electric power

**Linear Cutter
or
Rotary Cutter**

Twinkle Co L-Series dredges are deep mining machines that float. They are designed with the philosophy of rugged simplicity. L-Series dredges are purpose built machines to do one thing – produce sand & gravel efficiently from medium to deep depths. The smooth running Torqueshaft drive turns the dredge pump with either **Sidewinder** diesel power or direct-connected electric power. Twinkle Co instruments and controls are optimized to utilize the awesome productive capability of the ladderpump and deliver a continuous supply of high density solids to the process plant. Available with either a rotary or Linear cutter, diesel or electric power, L-Series dredges are matched to the needs of our customers. Contact Twinkle Co to discuss your production requirements and find out what an L-Series dredge can do for you.
