

A collection of Twinkle Co sand & gravel cutterhead baskets. Our baskets are designed and built specifically for sand & gravel mining. The baskets can rotate either direction, are fully hardsurfaced, have easily replaceable digger teeth and openings sized to keep out pump-plugging oversize material. Sizing bars on the basket openings are designed so that near-size rocks that cannot pass through to the suction are retained on the outside and scrubbed off as the basket rotates. The baskets can be built to mount on any existing cutterhead drive arrangement. Standard mounting is a tapered hub, other mounting options are available.
